Gym Day Pass App

Product Build Pack: audiences, requirements, story maps, MVP stories and system capabilities

1. Product and audiences

Product. A web app where people find a gym nearby and book a single day session, with no membership or contract.

Problem. (1) Gyms usually sell monthly or yearly contracts. (2) To find a gym that sells single day passes, people have to check every gym's website or call them.

Assumptions. Gyms list themselves and set their own day pass price. We earn a commission on each booking, paid by the gym. Payment runs through an external provider.

Audience	Technical fit (capabilities, resources)	Economic attractiveness (value, reach, cost of serving)
A1 Traveler: works out while traveling and cannot use their usual gym	Good. Listing gyms on a map, sorting by rating and price, booking and payment are standard web features a small team can build. Location search uses the browser's GPS.	**Value:** train in any city without a contract. **Reach:** large (business travelers, tourists, students abroad). **Cost:** low per user (hosting, payment fees); reached through search and travel channels. Weakness: uses the app only when traveling.
A2 Irregular gym goer: trains on an inconsistent schedule and wastes most of an expensive membership	Good. Same product and features as A1; needs easy rescheduling and booking history, which reuse the same booking data.	**Value:** pay only on the days they train. **Reach:** large local base with repeat bookings in their own city. **Cost:** low. Weakness: price sensitive, may compare against cheap memberships.

2. Functional requirements

ID	Observable behavior (the system must…)	Source need	Audiences
FR1	Show gyms near the user's location on a list and a map, at least 20 per result page.	Find gyms nearby in one place	A1, A2
FR2	Show gym details: photos, opening hours, equipment, day pass price and location.	Compare before visiting	A1, A2
FR3	Let users sort and filter gyms by rating and price.	Pick the best value	A1, A2
FR4	Show free dates and time slots and let users book a single session without contacting the gym.	No calls, no contracts	A1, A2
FR5	Let users sign up and log in so their bookings are saved.	See bookings later	A1, A2
FR6	Take payment for the session through an external payment provider.	Pay per day only	A1, A2
FR7	Show the user's upcoming and past bookings with their details.	Keep track of sessions	A1, A2
FR8	Let users reschedule or cancel a booking until 24 hours before the session.	Plans change	A1, A2
FR9	Open directions to the booked gym in the user's maps app.	Get there in an unfamiliar area	A1, A2
FR10	Let users add a booked session to their personal calendar.	Remember the session	A1, A2

3. Non-functional requirements

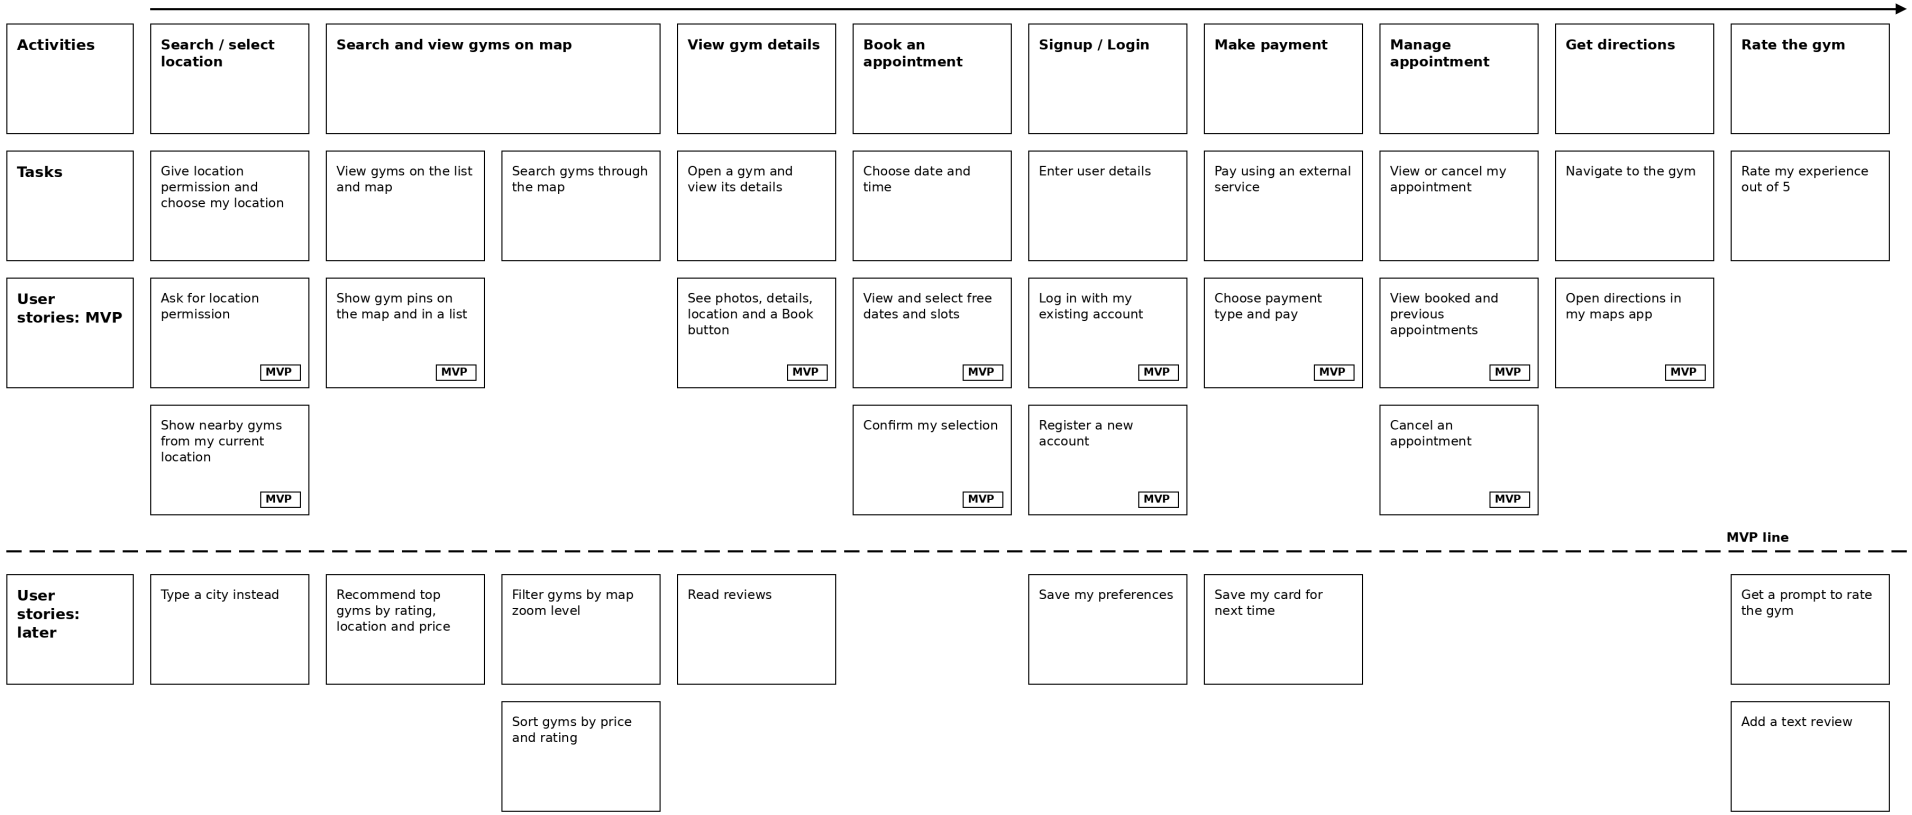

ID	Quality	Measurable target	Condition	Audiences
NFR1	Performance	Map and gym list load within 2 s	Mid range phone, 4G	A1, A2
NFR2	Responsiveness	Works without horizontal scrolling from 360 px phones to desktop	Latest Chrome, Safari, Firefox	A1, A2
NFR3	Usability	4 of 5 first time users find a gym and book within 3 min, unaided	Usability test on a phone	A1, A2
NFR4	Accessibility	Meets WCAG 2.2 AA; text resizable to 200%	Keyboard and screen reader	A1, A2
NFR5	Security	All traffic over HTTPS; passwords stored hashed; login session ends after 30 days unused	All accounts	A1, A2
NFR6	Privacy	GDPR, EU hosting; location used only during search and not stored; account deleted within 30 days of a request	All users	A1, A2
NFR7	Reliability	A booking is created only after payment succeeds; 0 double charges	Failed payments, retries, double taps	A1, A2
NFR8	Data accuracy	Gym pin within 50 m of the real entrance; gyms confirm details every 90 days	All listed gyms	A1, A2
NFR9	Scalability	Results within 2 s with 500 gyms in one area and 1,000 users searching at once	Busy city areas	A1, A2
NFR10	Availability	At least 99.5% uptime	Daily 06:00 to 23:00	A1, A2

4. User journeys and story maps

Two journeys, used by both audiences. Activities run left to right, tasks beneath, stories beneath their task. Notes marked MVP, above the dashed line, are the MVP.

Journey 1: Find, book and visit a gym

A traveler finds a gym nearby, books and pays for a visit, and gets there.

Journey 2: Return to the app and reschedule

A traveler with an existing booking comes back to the app and moves it to a new time.

Activities	Return to the app	Find my booking	Reschedule	Confirm the change	Get updated details
Tasks	Open the app and stay logged in	Open My bookings	Pick a new date and time	Review and confirm	Receive confirmation
User stories: MVP	Stay logged in when I return MVP	See my upcoming bookings MVP	See free slots at the same gym MVP	See old vs new slot and confirm MVP	Get an updated confirmation MVP
		Open the booking I want to change MVP	Select a new slot MVP	Get blocked if less than 24 h before MVP	Open directions to the gym MVP
User stories: later	Log in with Face ID	Get a reminder the day before	Move the booking to another gym	Pay a price difference or get a refund	Add the new time to my calendar

MVP line

5. MVP epics and stories

E1 Find the right gym

Outcome: the user finds a gym nearby and knows what they get.

1. Search and list gyms	
Description →	User can search and view gyms based on their current location.
Story →	As a traveler, I want to see gyms near my location on a list and a map, so that I can find one quickly.
Goal →	View nearby gyms on a list and a map.
Acceptance criteria →	**AC1:** Given location is allowed and 3 gyms are within 5 km, when I open search, then all 3 show as pins and in the list with distance and price. **AC2:** Given location access is denied, when I open search, then I can type a city instead.
Links →	Epic E1 · Map J1: Search / select location, Search and view gyms on map · FR1, NFR1, NFR6

2. Select gym and view details	
Description →	User can select a gym and view its photos and details.
Story →	As a traveler, I want to see photos and details of a gym, so that I can decide if it suits me.
Goal →	Detailed view of the selected gym.
Acceptance criteria →	**AC1:** Given I tap Iron Gym, when the page opens, then I see photos, opening hours, equipment, price, its location on a map and a Book button. **AC2:** Given the gym has no photos, when the page opens, then all details still show with a placeholder image.
Links →	Epic E1 · Map J1: View gym details · FR2, NFR8

E2 Book and manage a visit

Outcome: the user has a confirmed, paid visit they can change.

3. Book an appointment	
Description →	User can check available dates and times, log in or sign up, and pay.
Story →	As a traveler, I want to pick a free date and time and pay in the app, so that my visit is confirmed.
Goal →	Confirmed date and time, paid.
Acceptance criteria →	**AC1:** Given Saturday 10:00 is free at €12, when I select it, log in and pay, then the booking is confirmed and shows in My bookings. **AC2:** Given the payment fails, when I confirm, then no booking is made and I am not charged.
Links →	Epic E2 · Map J1: Book an appointment, Signup / Login, Make payment · FR4, FR5, FR6, NFR3, NFR5, NFR7

4. Manage appointment	
Description →	User can come back to the app and view, reschedule or cancel an existing appointment.
Story →	As an irregular gym goer, I want to reschedule or cancel my booking, so that I can adjust to my plans.
Goal →	Rescheduled or cancelled appointment with an updated confirmation.
Acceptance criteria →	**AC1:** Given a Saturday booking and a free Sunday slot, when I move it and confirm, then it shows Sunday, the Saturday slot becomes free and I get an updated confirmation. **AC2:** Given the visit is less than 24 hours away, when I try to change it, then I am told changes are no longer possible.
Links →	Epic E2 · Map J1: Manage appointment; Map J2: Find my booking, Reschedule, Confirm the change, Get updated details (shared story) · FR7, FR8

E3 Get to the gym

Outcome: the user arrives without searching for the address.

5. Get directions	
Description →	User can open directions to the booked gym in their preferred maps app.
Story →	As a traveler, I want directions to my booked gym, so that I can get there easily.
Goal →	Directions from the user's location to the gym.
Acceptance criteria →	**AC1:** Given a booking at Iron Gym, when I tap Get directions and pick Google Maps, then it opens with the gym as destination. **AC2:** Given no maps app is installed, when I tap Get directions, then the route opens in the browser.
Links →	Epic E3 · Map J1: Get directions; Map J2: Get updated details · FR9

6. System capabilities

Feature → system capability, with the operating conditions it must work under.

Feature	→ **System capability**	**Operating conditions**
1. Search and list gyms	Get the user's location (GPS or typed city), search gyms by distance and show them as map pins.	Location may be denied; results within 2 s on mobile data.
2. Select gym and view details	Store and load compressed gym photos and details.	Slow mobile connection; missing photos must not break the page.
3. Book an appointment	Track free slots, block double booking, log the user in and confirm only after payment succeeds.	Many users booking the same slot at once; failed or repeated payments never charge twice.
4. Manage appointment	Update or cancel the booking, release the old slot and apply the 24 hour rule.	Two changes arriving at the same time; refunds applied correctly.
5. Get directions	Open the user's maps app with the gym's address and coordinates.	Google Maps, Apple Maps or none installed; fall back to the browser.
